Turn your microfilm into high quality digital images, get customized data retrieval.

For over 25 years, GSI has helped its customers manage and store information. Let us use our experience to help you convert your microfilm to digital images. Graphic Science's experts will work closely with you to customize a microfilm conversion and information retrieval process to meet all of your business needs. We can take on any size job - from very small to very large.

Using **state of the art** scanning equipment, built-in **quality control** at every step of the process and a **highly experienced workforce**, GSI will convert your 16 or 35 mm roll film or cartridges to digital images. Once the images are created, they can be indexed in any way to meet your requirements. GSI can help you chose the right software for data retrieval or can build the retrieval software into the output media. We will put your output on CD-ROM, DVD or meet your specific requirements for output media. We can deliver your information via the Internet or FTP. Or, we can host your documents on the web so that you have no hardware or software investment.

Contact us today and we can discuss your current microfilm situation and develop a customized digital solution to meet your business needs.

Receive Output on:

- CD-ROM
- DVD
- Internet
